

Aim

Reduce preterm birth and improve pregnancy outcomes for MN women and their families

Identify women with prior SPTB

Initial visit
Visits < 20-24 weeks

1. Screen women for risk factors for PTB
2. Facilitate early first prenatal visit
3. Utilize assessment tools and treatment algorithm

Documentation Support/EHR

4. Develop optimal flow process for 17P procurement and dispensing
5. IT build for documentation for progress note, patient education, order sets, referrals for smoking cessation, etc.

Self activation & engagement of women with PSPB

Prenatal visits

6. Practice cultural humility
7. Ask "What matters most to you?"
8. Inquire about ease and difficulties in administering 17P
9. Connect woman to peer support & engage partner
10. Use teach back
11. Use Motivational Interviewing & explore barriers/resistance
12. Coproduce goals and follow up plan
13. Use handouts to assist in learning
14. Arrange for transportation if needed

Care delivery

Prenatal visits

15. Complete comprehensive maternal history
16. Ultrasound cervical surveillance
17. Cervical cerclage as clinically indicated
18. Follow assessment and treatment protocol/algorithm
19. Develop tracking tool
20. 5As for smoking cessation
